## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-16, 29-38, 44-47, drawn to a first method of treating cancer using a compound, classified in class 536, subclass various.
- II. Claims 17-22, 26-28, drawn to an assay, classified in class 435, subclass various.
- III. Claims 23-25, drawn to a method of treating a patient with a second compound, classified in class 424, subclass various.
- IV. Claim 39, drawn to a compound, classified in class 514, subclass various.
- V. Claim 40, drawn to a method of treating cancer using a third compound, classified in class 436, subclass various.
- VI. Claim 41, drawn to a third method of using a compound to treat cancer, classified in class 210, subclass various.
- VII. Claim 42 and 43, drawn to a method of treating cancer with a forth compound, classified in class 930, subclass various.

The inventions are distinct, each from the other because of the following reasons:

The different methods are restrictable from one another since the different methods in and of themselves show that there is more than one use for the compound. The compound can be used in a materially distinct process such as treating herpes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention: the many different types of compound encompassed by the claims. Applicant is required to pick a single specific compound for examination.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 4, 12, 14, 17, 20, 23, 26, 39-42 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
